Profile

I develop Python tools, API integrations and web applications. Since 2023, I have worked on personal software projects and workflows for my independent business. I am looking for a junior backend or full-stack role where I can contribute this practical experience and develop within a team.

Technical focus

- Python: data processing, CLI tools, pytest, property and regression tests.
- TypeScript / JavaScript: Next.js, React, Node.js, REST APIs.
- Data and integrations: PostgreSQL, Supabase, n8n, Telnyx / WebRTC, Resend.
- Tools: Git, GitHub Actions, Linux, PowerShell; PyTorch in the AutoLM research project.

Independent work and software projects

2023 - present · Practical software development through personal projects and independent work

- Development of tools for data processing, automation and web applications.
- Work on Team Gold CRM for lead processing, sales queues, browser calling and email workflows. Public architecture case study; the system code is private.
- Independent business work also includes e-commerce, affiliate marketing and online customer acquisition. Team Gold is my company; its business website is separate from my developer portfolio.

Selected projects

Team Gold CRM · Next.js / TypeScript / PostgreSQL

CRM case study covering Supabase Auth, browser calling and provider integrations. The architecture is publicly documented; system code remains private. Tests cover the published phone, email and recipient-deduplication helpers.

[Repository](#)

git-secret-scan · Python / Git

Pre-commit hook and GitHub Action for ten credential patterns. Masked output, explicit Git errors, tests against real Git repositories and property tests. Reproducible benchmark using synthetic test cases.

[Repository](#)

AutoLM · Python / PyTorch

Decoder-only transformer with custom tokenization, a training pipeline and workflow evaluation. Attention and tokenizer comparison tests, checkpoint resume and baselines. Experimental n8n workflow model with structure and import checks for generated skeletons.

[Repository](#)

Windows Screen Time Manager · PowerShell / C#

System-wide time limits using SYSTEM tasks, WTS sessions and Win32/.NET. Separate ACLs for configuration and status display; syntax and pure-logic tests. Complete installer integration on a fresh Windows system remains unverified.

Education and working approach

Fachabitur, metal technology · completed

No formal IT qualification or employed software developer role to date. My technical work samples are publicly documented. I use AI assistance during development and review code, architectural decisions and behavior through tests.
